

Exclude Employee from Payroll Export

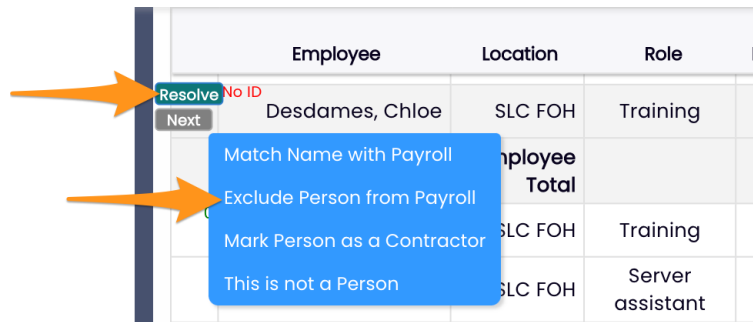

Last Modified on 03/28/2022 3:40 pm MDT

You can exclude employee from payroll using one of the following methods.

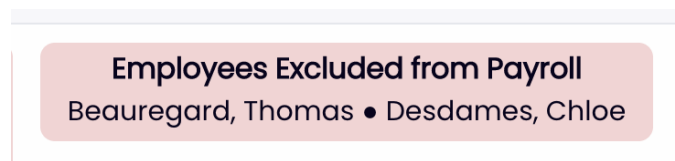

From Employee's Salary / Wage Tab, Check "Exclude from Payroll Export"

From the Payroll Report, in the event employee doesn't have a payroll ID, you can press **Resolve** next to their name.

When you run the payroll report, you'll be warned about any employees who are excluded from the payroll output.

To re-add an employee to the payroll export, you can quick-add as shown below from the payroll report, or uncheck the exclusion from the employee's wage tab.

Employee		Location
Not Exported +	Desdomes, Chloe	SLC FOH

NOTE: If the motivation for excluding employee from the payroll output is because they are Salary, not Hourly, please set them as a Salary employee, and you will not need to apply an exclusion. Even if you don't enter actual salaries for tracking, you can configure an employee as Salary with a zero wage. See:
